

Posterior Concentration in Normal Mixture Models: An SLT Perspective

Your Name*

February 7, 2026

Abstract

Write your abstract here. This template demonstrates how to integrate LaTeX papers with the research monorepo workflow.

1 Introduction

This is an example paper that demonstrates:

- How to reference figures from your notebooks
- Mathematical notation: $E = mc^2$
- Code integration with the monorepo packages

2 Methods

You can reference your monorepo code and results:

$$\mathcal{L}(\theta) = \sum_{i=1}^n \log p(x_i|\theta) \tag{1}$$

3 Results

Include figures generated from your notebooks in `projects/`.

Figure 1: Posterior concentration across sample sizes. Generated from `fit_dataset.ipynb`.

4 Conclusion

Your conclusions here.
